Demonstration. Built from synthetic data.

Is Demo Multi-Asset Fund within its risk limits?

No: 1 limit is breached.

Largest single position stands at 8.9% against a limit of 8.0%. On a bad day, one in a hundred, the portfolio could lose 2.0%. A repeat of the worst scenario tested, COVID-19 crash, would cost 23%.

USD 7.3m	23%	7 of 10
at risk on a bad day	loss in COVID-19 crash	limits clear

Decisions needed

	DECISION	WHO	BY WHEN
1	Trim Synthetic Equity 01 by about USD 3.1m to clear the limit	Portfolio manager	This week
2	Agree what to do if the 2 limits near their ceiling are reached	Risk committee	Next meeting
3	Rerun on every new holdings file	Risk manager	Each month

The evidence is in the report; the dashboard tries a trim before anyone trades.
